

DM Series Nd:YLF & Nd:YAG Green Nanosecond Lasers

www.photonix.com

Photonic Industries' DM Series Nd:YLF and Nd:YAG green nanosecond lasers combine remarkably high pulse energies (up to 100 mJ) or high average powers (up to 200 W) with a simple, rugged, and efficient form factor, all from one fully independent laser resonator. Dual Head configurations can go up to 200 mJ of pulse energy or up to 400 W of power. The proprietary single laser resonator design¹ ideally fulfills the needs of both research and industry, from PIV research, to providing the necessary high energy for laser thermal processing or annealing applications in an industrial, compact form factor.

Photonics Industries DM Series nanosecond lasers have a separate external power supply box, no longer requiring an external controller or utility module. The RF driver is located in the laser head, and all control electronics and connections for operation and control of the laser can be found on the back panel of the compact laser head.
